

## Setup M2\_HOME in mac

steps to set m2\_Home path

- 1.Download the apache maven from website or in android -sdk repository it is available and download from there
- 2.Then open the terminal
- 3.type `/usr/bin/open ~/.bash_profile`
- 4.All the path setup like JAVA\_HOME, M2\_HOME, ANDRIOD\_HOME will be given in same file I.e on `/usr/bin/open ~/.bash_profile`
- 5.Then enter the following below commands
- 6.Then save and close the terminal
- 7.Open the terminal and type `source ~/.bash_profile`
- 8.And Type `mvn -version` command

Note: No need to setup java path for M2\_HOME path and it some times depend on the Mac OS and version

– MY Mac configuration

Version - 10.12.6 (16G1710)

Processor - 3.06 GHz Intel Core i3

Ram - 8 GB 1333 MHz DDR3
