

# Sample Pipeline script

## Implemented in Jenkins Job

```
stage('Validate the project') {
    sh "mvn validate"

}

stage('compile the project') {
    sh "mvn clean compile"

}

stage('Test the project'){
    sh "mvn clean test"
}

stage('Creating package'){
    sh 'mvn',parameter:"${params.package}"
}
```

---

```
agent any
stages {
    stage('clone repository') {
        steps {
            sh "rm -rf DeplymentTomcat"
            sh "Git clone https://github.com/prasadarun/DeplymentTomcat"
        }
    }
    stage('Validate the project') {
        steps {
            sh "mvn validate -f DeplymentTomcat"
        }
    }

    stage('Compile the project') {
        steps {
            sh "mvn clean compile -f DeplymentTomcat"
        }
    }
}
```

```
stage('Test the project') {
    steps {
        sh "mvn clean test -f DeplymentTomcat"
    }
}

stage('Pacakge the project') {
    steps {
        sh "mvn package -f DeplymentTomcat"
    }
}
}
```
